

There is information about payment for services by cards and security rules when making payments on the pages of the cryptmix.org:

«Payment by payment card in the Internet

You can pay for your order with a payment card Visa, Mastercard or MIR in the online store. After successful payment you will receive an electronic check. The information indicated on the check contains all the data on the payment operation performed.

Security guarantees

Your payment card information is guaranteed to be protected in accordance with PCI DSS security standards. The card data is entered on a secure bank payment page, information transfer occurs using SSL encryption technology. Further transmission of information occurs through closed banking networks that have the highest level of reliability. For additional cardholder authentication, the 3D-Secure protocol is used. If the Issuer supports this technology, you will be redirected to its server to enter additional payment details. "
